Open Access

Open Access provides the opportunity for free and online access to scholarly literature that can be utilized further with proper author attribution. A significant development for open access publishing has been coming into effect with several major funding policies. The US National Institutes of Health (NIH) announced their Public Access Policy, requiring all peer-reviewed articles resulting from research carried out with NIH funding to be deposited in PubMed Central and to be made freely available within 12 months of publication.

The European Commission has introduced a pilot open access project in relation to the EC Seventh Research Framework Program of funding requiring research grant recipients to deposit open access copies of published articles into an appropriate repository, the maximum delay being 6 or 12 months, depending on the subject area. The research publications do not reach to a wide audience even to the scientific community, affecting both its visibility thus improved impact also for research work. In India, there are only a few research institutions having their Institutional Archives/ Repositories in place. Initiation at the national level in this direction and motivation of scientific and technological community for their active involvement in this programme is need of the hour.

Open Innovation has advantages such as, faster time to market, reducing R&D and product development costs, tapping global pool of experts, getting new product ideas, uncovering readymade solutions and sharing risk with others.
